## **SOURCE HYDROPANELS MEAN FRESH WATER EVERY DAY**

### **How much does SOURCE cost?**

- A standard SOURCE array is two hydropanels, at an estimated project cost between \$5,500 and \$6,500 (including shipping, installation, and tax). Standard installation varies by home requirements and location. With a 15-year life, SOURCE will provide a case of water per day or 12 standard bottles for less than \$0.15 per bottle.

### **How much maintenance does SOURCE require?**

- SOURCE is low-maintenance. It requires the air filter and polishing cartridge to be changed once annually. The mineral cartridge needs to be changed once every five years.

### **Does SOURCE work with most humidity levels?**

- SOURCE produces water in communities with a wide range of climates. The array at the headquarters in Arizona makes water yearlong despite low humidity.

### **Will pollution in the air make its way into the water?**

- SOURCE has two steps in its water production process that keep any pollution in the air from getting into the water. First, the built-in air filter keeps particulates and other debris from finding their way into the hydropanel. Second, because SOURCE's special materials only attract water molecules, the water produced is pure. This pure liquid is mineralized with calcium and magnesium and kept clean through an integrated sterilization system.

### **How can I purchase Source?**

- Click [here](#) to reach one of SOURCE's sales representatives.
